©1991 Whirlpool Corporation

Thank you for buying a Whirlpool appliance. Please complete and mail the Owner Registration Card provided with this product. Then complete the form below. Have this information ready if you need service or call with a question.

- Copy model and serial numbers from plate (located on lower left side of oven frame) and purchase date from sales slip.
- Keep this book and the sales slip together in a handy place.

Model Number

Serial Number

Purchase Date

Service Company Phone Number

You are responsible for:

- Having the oven installed by a qualified installer.
- Installing the oven where it is protected from the elements, and in a wall or cabinet strong enough to support its weight. (See the Installation Instructions.)
- Making sure the oven is not used by anyone unable to operate it properly.
- Properly maintaining the oven.
- Using the oven only for jobs expected of a home oven.

Important Safety Instructions

Gas ovens have been thoroughly tested for safe and efficient operation. However, as with any appliance, there are specific installation and safety precautions which must be followed to ensure safe and satisfactory operation.

A WARNING	To reduce the risk of fire, electrical shock, injury to persons, or damage when using the oven, follow basic precautions, including the following:	
WARNING: If the information in this manual is not followed ex- actly, a fire or explosion may result causing property damage, personal injury or death.		
	E OR USE GASOLINE OR OTHER FLAMMABLE LIQUIDS IN THE VICINITY OF THIS OR ANY NCE.	
 WHAT TO DO IF YOU SMELL GAS: DO NOT TRY TO LIGHT ANY APPLIANCE. DO NOT TOUCH ANY ELECTRICAL SWITCH; DO NOT USE ANY PHONE IN YOUR BUILDING. IMMEDIATELY CALL YOUR GAS SUPPLIER FROM A NEIGHBOR'S PHONE. FOLLOW THE GAS SUPPLIER'S INSTRUCTIONS. IF YOU CANNOT REACH YOUR GAS SUPPLIER, CALL THE FIRE DEPARTMENT. 		
INSTALLATION QUALIFIED INS PLIER.	AND SERVICE MUST BE PERFORMED BY A TALLER, SERVICE AGENCY OR THE GAS SUP-	
-IMPORTANT-		
TO THE INSTAL WITH THE UNIT	LER: PLEASE LEAVE THIS INSTRUCTION BOOK	
TO THE CONSU FOR FUTURE R	MER: PLEASE READ AND KEEP THIS BOOK EFERENCE.	

2

- Install or locate the oven only in accordance with the provided Installation Instructions. It is recommended that the oven be installed by a qualified installer. The oven must be properly connected to the proper gas supply and checked for leaks. The oven must also be properly connected to electrical supply and grounded.
- Gas fuels and their use in appliances can cause minor exposures to benzene, formaldehyde, carbon monoxide and soot, primarily from incomplete combustion.
 Significant exposure to these substances can cause cancer or reproductive harm.
 Properly adjusted burners with a blue, rather than a yellow, flame will minimize incomplete combustion. Venting with a hood or an open window will further minimize exposure.
- Do not operate the oven if it is not working properly, or if it has been damaged.
- Do not use the oven for warming or heating the room. Persons could be burned or injured, or a fire could start.
- Do not attempt to light the oven burner during a power failure. Personal injury could result.
- Use the oven only for its intended use as described in this manual.
- Do not wear loose or hanging garments when using the oven. They could ignite if they touch a hot surface and you could be burned.
- Do not touch interior surfaces of oven. Interior surfaces of an oven become hot enough to cause burns. During and after use, do not touch, or let clothing or other flammable materials contact interior surfaces of oven until they have had sufficient time to cool. Other surfaces of the oven may become hot enough to cause burns; such as, the oven vent opening, the surface near the vent opening, the oven door and the oven door window.
- Use only dry potholders. Moist or damp potholders on hot surfaces may result in burns from steam. Do not use a towel or bulky cloth for a potholder. It could catch on fire.
- Do not heat unopened containers. It could explode. The hot contents could cause burns and container particles could cause injury.

- Grease is flammable and should be handled carefully. Let fat cool before attempting to handle it.
- Do not use water on grease fires. Never pick up a flaming pan. Smother flaming pan by covering with a well-fitted lid, cookie sheet or flat tray. Flaming grease outside of pan can be extinguished with baking soda or, if available, a multipurpose dry chemical or foam-type extinguisher.
- Use care when opening oven door. Let hot air or steam escape before removing or replacing food.
- Always position oven rack(s) in desired location while oven is cool.
- Do not store flammable materials in or near the oven or in the storage drawer. They could explode or burn.
- Do not store things children might want above the oven. Children could be burned or injured while climbing on it.
- Do not leave children alone or unattended in area where the oven is in use. They should never be allowed to sit or stand on any part of the oven. They could be burned or injured.
- Never use a match or other flame to look for a gas leak. Explosion and injury could result.
- Know where your main gas shut off valve is located.
- Keep oven vents unobstructed.
- Clean your oven regularly. See care and cleaning instructions in this manual.
- Be sure all oven parts are cool before cleaning.
- Do not clean door seal. It is essential for a good seal. Care should be taken not to rub, damage, or move the seal. Clean only parts recommended in this Use and Care Guide.
- Do not use oven cleaners. No commercial oven cleaner or oven liner protective coating of any kind should be used in or around any part of the oven.
- Before self-cleaning the oven, remove broiler pan, broiler grid, oven racks and other utensils. Do not use your oven to clean miscellaneous parts.
- Do not repair or replace any part of the oven unless specifically recommended in this manual. All other servicing should be referred to a qualified technician.
- Disconnect the electrical supply before servicing the oven.

-SAVE THESE INSTRUCTIONS-

Using Your Oven

This oven is equipped with an electronic ignitor. The electronic ignitor automatically lights the oven burner each time it is used. This oven cannot be used during prolonged power failure.

The electronic oven controls

There are three parts in the oven control section:

- The digital display.
- The command buttons.
- The Set Knob.

Instructions for each oven control are covered on the following pages. Read them carefully.

When you first plug in the oven, the time display will flash until you set a new time. If, after you set the clock (page 6) the time display flashes, your electricity was off for a while. Reset the clock.

Digital display/clock

When you are not using the oven, this is an accurate digital clock. When using the oven or Minute Timer, the display will show the time, temperature settings and what command buttons have been pressed.

When showing the time of day, the display will show the hour and minutes.

When using the Minute Timer, the display shows minutes and seconds in the following sequence:

- For settings from 0 minutes to 1 minute 55 seconds, the display will increase in 5-second increments.
- For settings from 2 minutes to 9 minutes 50 seconds, the display will increase in 10-second increments.
- For settings from 10-59 minutes, the display will increase in 1-minute increments.
- For settings from 1 hour to 1 hour 55 minutes, the display will increase in 5-minute increments.
- For settings from 2 hours to 9 hours 55 minutes, the display will increase in 10-minute increments.

When using Bake Time, the display shows hour and minutes.

Command buttons

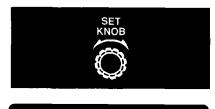

The command buttons tell the oven what to do and in what order. A few examples:

- Clock tells the oven you are going to set the clock.
- Cancel tells the oven to turn off.

Each command button (except Cancel) has its own indicator. The indicator comes on when you touch the command buttons.

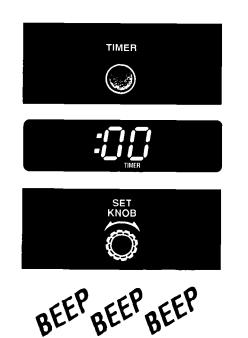

Set Knob

Once you've pushed a command button to tell the oven what you want it to do, you'll use the Set Knob to set a temperature or time. Turning the Set Knob clockwise increases the number on the display. Turning the Set Knob counterclockwise decreases the number on the display.

Setting the clock

- 1. Push the Clock button. The TIME indicator will show in the display. Release the Clock button.
- 2. Turn the Set Knob until the correct time shows in the large display.

Using the electronic Minute Timer

The Minute Timer does not start or stop the oven. It works like a kitchen timer. It can be set in minutes and seconds up to 9 hours, 55 minutes. You will hear three beeps when the set time is up, then one beep every 10 seconds for 5 minutes or until the Timer button is pushed.

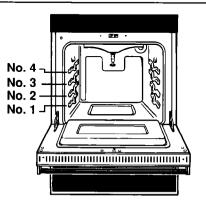

- Push the Timer button. The TIMER indicator will come on and the large display will show ":00".
- 2. Turn the Set Knob until the desired time shows in the large display. The Minute Timer will begin counting down 2 seconds after the time is set.

When time is up, you will hear three beeps.

To cancel the Minute Timer:

Push the Timer button.

Using the Cancel button

The Cancel button will cancel any command except for times set with the Timer button. The large display will then show the time of day or, if Minute Timer is also being used, the time remaining.

The oven racks

Rack positions

Your oven has four rack positions. Rack position 4 is the highest position, or farthest from the bottom of the oven. Rack position 1 is the lowest position, or closest to the bottom of the oven.

There are two straight racks for the oven. When baking on two racks, place one rack on the bottom and the other rack on rack position 3.

Be sure to arrange the oven rack(s) before putting foods into the oven or turning the oven on.

AWARNING

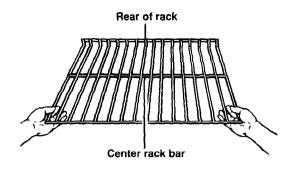

Fire and Personal Injury Hazard

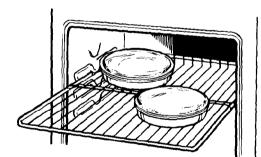

- Always position oven rack(s) in desired location(s) before turning oven on. Be sure the rack(s) is level.
- If rack(s) must be moved while oven is hot, use potholders or oven mitts to protect hands.
- Do not let potholders or oven mitts contact hot burners.
- Always use a dry potholder or oven mitt to change rack(s) or handle utensils in the oven. Do not use a damp potholder or oven mitt. Steam burns could result.

Failure to follow the above precautions may result in fire or personal injury.

1

Using Your Oven Continued

To remove oven racks:

- 1. Pull rack out until bar on back of rack touches first stop.
- 2. Lift up the front and slide out.

To replace oven racks:

- 1. Place rear of rack on rack guides. Make sure center rack bar is facing down.
- 2. Tilt up front of rack and push into place.

Rack and pan placement

When using one rack, the rack should be placed so the top of the food will be centered in the oven. Always leave at least 1 1/2 to 2 inches (4-5 cm) between the sides of the pan and the oven walls and other pans.

For proper cooking, follow these guidelines for specific foods:

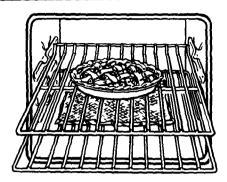

- Angel and bundt cake pans, yeast breads, frozen pies, large roasts and turkeys-place rack on lowest level
- Casseroles, muffins, most quick breads and meats-place rack on second level from bottom
- Cookies, biscuits, cakes and non-frozen piesplace rack on second or third level from bottom

The hot air must circulate around the pans in the oven for even heat to reach all parts of the oven.

For best air circulation:

- Place the pans so that one is not directly over the other.
- Allow 1 1/2-2 inches (4-5 cm) of space around each pan and between pans and oven walls.
- Use only one cookie sheet in the oven at one time.
- When cooking with one pan, place pan in the center of the oven rack.
- When cooking with two pans, place pans in opposite corners of the oven rack.
- When cooking with three or four pans, place pans in opposite corners on each oven rack. Stagger, so no pan is directly over another.

NOTE: "Oven peeking" may cause heat loss, longer cooking times and unsatisfactory baking or roasting results. Rely on your timer, and view food through door window.

How to use aluminum foil for baking

Use aluminum foil to catch spill-overs from pies or casseroles.

- Place the foil on the oven rack below the rack with the food. The foil should have the edges turned up and be about 1 inch (3 cm) larger all around than the dish holding the food.
- Do not cover the entire rack with aluminum foil. It will reduce air circulation and cause poor cooking results.
- Do not line Self-Cleaning Oven bottom with foil or other liners. It will reduce the flow of air in the oven and cause poor baking results.

AWARNING

Burn and Product Damage Hazard

- Make sure all controls are OFF and the oven is cool before using foil. Failure to do so can result in burns.
- Do not use foil to cover oven floor or to completely cover a rack. Good air circulation is needed for the oven to operate properly. Damage to the oven finish will occur if foil is left in oven during the Self-Cleaning cycle.

Baking with preheating

For best results when baking, preheat the oven before placing food in the oven. The oven can be programmed to preheat at any temperature from 170°F to 550°F.

NOTE: Preheating is not necessary when roasting or when cooking casseroles.

To preheat:

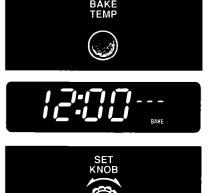

- Position the rack(s) properly before turning on the oven. To change rack position, pull rack out to stop, raise front edge and lift out. The rack(s) should be placed so the top of the food will be centered in the oven. Always leave at least 1 1/2 to 2 inches (4-5 cm) between the sides of the pan and the oven walls and other pans.
- Push the Preheat button. The small display will show "----" and the BAKE indicator will come on.
- 3. To set a baking temperature, turn the Set Knob until the desired temperature shows in the small display. Release the Set Knob. The small display will show "PrE" and the BAKE and ON indicators will come on. The burner will light in 50-60 seconds.
- 4. When the oven is finished preheating, the oven will beep three times and the small display will show the programmed set temperature.

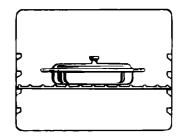

5. Put food in the oven.

The oven will automatically go from preheating into baking. You do not have to set a separate baking cycle. During baking, the oven burner will turn on and off to keep the oven temperature at the setting. The ON indicator will cycle on and off with the burner.

6. When baking is done, push the Cancel button. The oven will then shut off.

Baking/roasting without preheating

- 1. Position the rack(s) properly **before** turning on the oven. (For more information, see item #1 in "Baking with preheating" on page 9.)
- 2. Push the Bake Temp button. The small display will show "---" and the BAKE indicator will come on.

 To set a baking/roasting temperature, turn the Set Knob until the desired temperature shows in the small display. The display will increase in 5°F increments. The BAKE and ON indicators will come on. The burner will light in 50-60 seconds.

4. Put food in the oven.

During baking/roasting, the oven burner will turn on and off to keep the oven temperature at the setting. The ON indicator will cycle on and off with the burner.

5. When baking/roasting is done, push the Cancel button. The oven will then shut off.

Broiling

- 1. Position the rack **before** turning the oven on. Refer to the chart on page 12 for recommended rack positions.
- 2. Preheat in BROIL for 5 minutes with oven door closed. Do not preheat with broiler pan in place.
- 3. To preheat, push the Broil button. The small display will show "---" and the BROIL indicator will come on.
- 4. You can broil at one of two settings "LO" or "HI". Turn the Set Knob to the setting you want. When the oven turns on, the ON indicator will come on. The burner lights automatically in 50-60 seconds. Preheat for 5 minutes.

NOTE: For most foods, broil at "HI". The "LO" setting can be used when broiling foods which overcook easily, such as fish or meringues. The "LO" setting can also be used when broiling foods that are precooked.

- 5. After preheating, put the broiler pan and food on the rack.
- 6. Completely close the oven door to assure proper broiling temperatures.
- 7. When broiling is done, push the Cancel button. The time of day will then show in the large display.

Broiling tips

- Use the broiler pan and grid for broiling. They are designed to drain excess liquid and fat away from the cooking surface to help prevent spatter, smoke or fire.
- If you broil small quantities, you may want to use a small broiler pan. They are available in the housewares section of many department stores.
- For best broiling results, preheat in BROIL for 5 minutes. Do not preheat with broiler pan in place.
- Broiling rack position determines how the burner cooks your food. The lower the position, the more broiler grid area covered. See "Broiling rack position chart" below for more information.
- To sear meat, place broiler pan at one of the higher rack positions so that meat is very near the flame.
- Small steaks may be broiled in the higher rack positions.
- To cook large steaks and other thick cuts of meat well done, move them to a lower rack position after searing.
- Refer to a broiling chart in a reliable cookbook for correct broiling times.
- After broiling, remove the broiler pan from the oven when you remove the food. Drippings will bake on the pan if it is left in the heated oven.

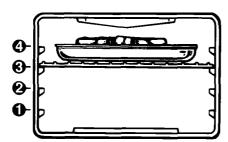

AWARNING

Fire Hazard

- Place meat the correct distance from the burner. Meat placed too close to the burner may spatter, smoke, burn or catch fire during broiling.
- To ensure adequate grease drainage, do not use cookie sheets or similar pans for broiling. Also, covering the broiler grid with foil is not recommended. Poor drainage of grease may result in fire.

Broiling rack position chart

RACK POSITION FROM BOTTOM	FOOD
3	Rare steaks
2	Medium steaks, fish and hamburgers
1	Well-done foods such as chicken, lobster, ham slices and pork chops

Adjusting the oven temperature control

Does your oven seem hotter or colder than your old oven? The temperature of your old oven may have shifted gradually without you noticing the change. Your new oven is properly adjusted to provide accurate temperatures. But, when compared to your old oven, the new design may give you different results.

If, after using the oven for a period of time, you are not satisfied with the temperature settings, they can be adjusted by following these steps:

1. Push and release the Bake Temp button.

ВАКЕ ТЕМР

2. Turn the Set Knob until 550°F appears on the small display.

- 3. Within two seconds, push and hold the Bake Temp button until the special two-digit display appears. Release the Bake Temp button. The display now indicates the amount of degrees offset between the original factory temperature setting and the current temperature setting. If the oven control has the original factory setting, the display will read "00".
- You can now change the setting up or down 35°F, in 5°F steps. To do so, turn the Set Knob until the desired amount of offset appears in the display.

NOTE: If you have decreased the setting, a minus sign (-) will appear before the number.

5. When you have made the desired adjustment, push the Cancel button to go back to the time of day display.

NOTE: Adjusting the oven temperature control will only change cooking temperatures. It will not affect self-cleaning temperatures.

Using the electronic MEALTIMER[™] control

The electronic MEALTIMER control is designed to turn the oven on and off at times you set, even when you are not around.

Automatic baking/roasting is ideal for foods which do not require a preheated oven such as meats and casseroles. Do not use the automatic cycle for cakes, cookies, etc. ... undercooking will result.

To start baking/roasting now and stop automatically:

- 1. Position rack(s) properly, and place the food in the oven.
- 2. Push the Bake Time button. The large display will show "--:--" and the blue BAKE and TIME indicators will come on.
- **3.** Turn the Set Knob clockwise until the desired baking/roasting time, up to 11 hours 59 minutes, shows in the large display.

вие тіме ваке

BEEP BEEP BEEP

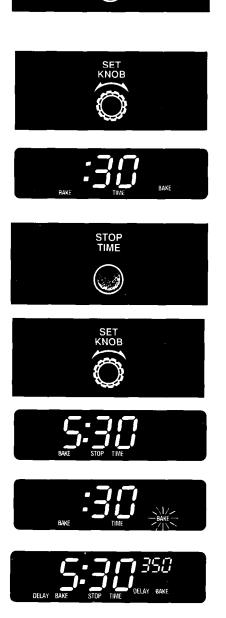

- Push the Bake Temp button and set the desired temperature. The display will show the set temperature and the time remaining. The red ON and BAKE indicators will come on.
- The display will count down in 1-minute increments.
- 6. When baking/roasting time is completed, the oven will turn off automatically, beep 3 times, then beep once every 10 seconds for 5 minutes or until the Cancel button is pushed. The time of day will show in the large display.

To delay start and stop automatically:

- 1. Position the oven rack(s) properly, and place the food in the oven.
- 2. Push the Bake Time button. The large display will show "--:--" and the blue BAKE and TIME indicators will come on.
- 3. Turn the Set Knob clockwise until the desired baking/roasting time shows in the display.

 Push the Stop Time button. The blue BAKE, STOP and TIME indicators will come on. Turn the Set Knob clockwise until the desired stop time shows in the large display.

The display will then change to showing the baking/roasting time and the blue BAKE and TIME indicators will come on. The oven will beep once and the red BAKE indicator will flash. If a baking/roasting temperature is not selected within 15 seconds, the control will cancel.

BAKE TIME

- 5. Push the Bake Temp button and set the desired temperature. The stop time will show in the large display. The red BAKE indicator and both DELAY indicators will come on.
- 6. Changes can be made at any time by pressing a command button.

- When the start time is reached, the DELAY and STOP indicators will go off. The display will show the oven temperature and the ON indicator will come on.
- 8. When baking/roasting time is completed, the oven will turn off automatically, beep 3 times, then beep once every 10 seconds for 5 minutes or until the Cancel button is pushed. The time of day will show in the large display.

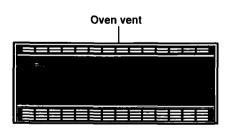

To cancel the MEALTIMER[™] control setting:

Push the Cancel button. The time of day will then show in the large display.

AWARNING

To avoid sickness and food waste when using the MEALTIMER[™] control:

- Do not use foods that will spoil while waiting for cooking to start, such as dishes with milk or eggs, cream soups, and cooked meats or fish. Any food that has to wait for cooking to start should be very cold or frozen before it is put in the oven. MOST UNFROZEN FOODS SHOULD NEVER STAND MORE THAN TWO HOURS BEFORE COOKING STARTS.
- Do not use foods containing baking powder or yeast when using delay start. They will not rise properly.
- Do not allow food to remain in oven for more than two hours after end of cooking cycle.

The oven vent

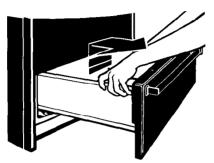

Hot air and moisture escape from the oven through a vent located above the control panel. The vent is needed for air circulation. **Do not block the vent.** Poor baking/roasting will result.

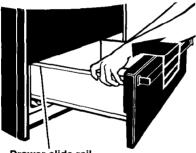

The storage drawer

The storage drawer is for storing pots and pans. The drawer can be removed to make it easier to clean under the range. **Use care when handling the drawer.**

Removing the storage drawer:

- 1. Empty drawer of any pots and pans before removing drawer.
- 2. Pull drawer out slightly. Lift front and pull all the way out.

Replacing the storage drawer:

- 1. Fit ends of drawer slide rails into the oven slide rails on both sides of opening.
- 2. Lift front and slide drawer closed.

AWARNING

Explosion and Fire Hazard Do not store flammable materials in the storage drawer. They could explode or burn.

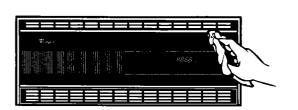

Drawer slide rail

Caring For Your Oven

Burn, Electrical Shock, Fire and Explosion Hazard

- Make sure all controls are OFF and the oven is cool before cleaning.
- Do not use oven cleaners, bleach or rust removers.
- Do not use gasoline or other flammable liquids or vapors to clean this or any other appliance.
- Do not use your oven for storage.
- Keep the appliance area clear and free from combustible materials, gasoline and other flammable vapors and liquids.
- Do not obstruct the flow of combustion and ventilation air.

Failure to follow these guidelines could result in burns, electrical shock, fire or explosion.

Control panel and command buttons

- 1. Pull command buttons straight off.
- Use warm, soapy water or spray glass cleaner and a soft cloth to wipe the control panel. Rinse and wipe dry with a soft cloth.
- Wash command buttons in warm, soapy water. Rinse well and dry with a soft cloth. Do not soak.
- 4. Replace command buttons by pushing them firmly into place.

NOTE: When cleaning, never use steel wool, abrasives, or commercial oven cleaners which may damage the finish. After cleaning, make sure you have not turned oven on when replacing buttons. If oven has been turned on, push Cancel button.

The Self-Cleaning cycle uses **very high heat** to burn away soil. Before you start, make sure you understand exactly how to use the Self-Cleaning cycle safely.

Before you start

- 1. Clean the indicated areas by hand. They do not get hot enough during the Self-Cleaning cycle for soil to burn away. Use hot water and detergent or a soapy steel wool pad on ...
 - The inside of the door around the edge. (The window may also require hand-cleaning.)
 - The frame around the oven.

Do not clean, move or bend the fiberglass seal. Poor cleaning and poor baking/roasting will result.

2. Remove the broiler pan and any pots and pans you may have in the oven.

NOTE: The broiler pan and grid can be cleaned in the oven only if most of the soil has been removed by hand-cleaning or a dishwasher. If most of the soil has not been removed, excessive smoking will occur.

- 3. Wipe out any loose soil or grease. This will help reduce smoke during the Self-Cleaning cycle.
- 4. If you want the oven racks to remain shiny, remove from the oven and clean them by hand. Otherwise, put oven racks on second and fourth guides (guides are counted from bottom to top). After racks are cleaned in the Self-Cleaning cycle, they become harder to slide. See page 23.

Heat and odors are normal during the Self-Cleaning cycle. If needed, remove them by opening a window or by turning on a vent hood or other kitchen vent during the cycle.

NOTE: This oven is equipped with an internal cooling fan. A fan sound will be heard during a normal Self-Cleaning cycle. This fan comes on automatically to keep the electronic controls cool. Canceling the oven will not turn off this fan. It will continue running until electronic controls have sufficiently cooled. The fan will then automatically turn off.

AWARNING

Personal Injury and Product Damage Hazard

- Do not touch the oven during the Self-Cleaning cycle. It could burn you.
- Do not use commercial oven cleaners in your oven. Cleaners may produce hazardous fumes or damage the porcelain finish.
- Do not use foil or other liners to line the oven bottom. During the Self-Cleaning cycle, foil can burn or melt and damage the oven surface.
- Do not block the vent during the Self-Cleaning cycle. Air must move freely for best cleaning results.

Setting the controls

- 1. Make sure the Clock is set to the correct time of day. (See "Setting the clock" on page 6.)
- 2. Push the Clean button.
- 3. <u>To start cleaning immediately</u>, turn the Set Knob until "3:00" and the CLN and TIME indicators appear on the display. Three hours is recommended for moderately soiled ovens. A Self-Cleaning cycle can be set for a 2-4 hour period. The CLEAN, LOCKED and ON indicators will come on to indicate that cleaning has begun.

CANCEL

- 4. <u>To delay start of cleaning</u>, turn the Set Knob until "3:00" and the CLN and TIME indicators appear on the display. Immediately push the Stop Time button. The blue DELAY, CLN, STOP and TIME indicators will come on. Immediately turn the Set Knob to the new stop time. The red DELAY and CLEAN indicators will come on.
- 5. After the Self-Cleaning cycle is programmed, the LOCKED indicator will come on. The door cannot be opened when this indicator is on.
- 6. After the Self-Cleaning cycle is completed, the CLEAN indicator will go off and the time of day will show in the large display.
- When the oven reaches normal baking/ roasting temperatures, the LOCKED indicator goes off.
- 8. After the oven is cool, wipe off any residue or ash with a damp cloth. If needed, touch up spots with a soapy steel wool pad.

Special tips

- Keep the kitchen well ventilated during the Self-Cleaning cycle to help get rid of heat, odors and smoke.
- Clean the oven before it gets heavily soiled. Cleaning a very soiled oven takes longer and results in more smoke than usual.
- If the Self-Cleaning cycle does not get the oven as clean as you expected, the cycle may not have been set long enough or you may not have prepared the oven properly. Set the Self-Cleaning cycle longer the next time and handclean areas noted on page 19.

To stop the Self-Cleaning cycle at any time:

- 1. Push the Cancel button.
- 2. When the LOCKED indicator goes off, you can open the oven door.

Caring For Your Oven Continued

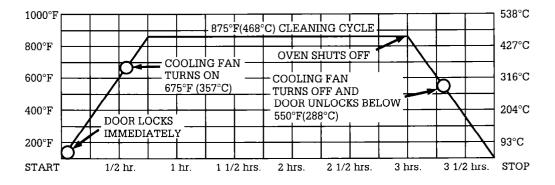

How it works

During the Self-Cleaning cycle, the oven gets much hotter than it does for baking, roasting or broiling ... approximately 875°F (468°C). This heat breaks up grease and soil and burns it off.

This graph shows approximate temperatures and times during a Self-Cleaning cycle for three hours.

Self-Cleaning cycle - three-hour setting

(Approximate temperatures and times)

Notice that the heating stops when the 3-hour setting is up, but that it takes longer for the oven to cool down enough to unlock.

Cleaning tips

Control knobs

Clean with warm, soapy water and a soft cloth.

- Wash, rinse and dry well.
- Do not soak.

Control panel and other exterior surfaces

Clean with warm, soapy water or spray glass cleaner and a soft cloth.

- Wash, rinse and dry well.
- Follow directions provided with the cleaner.

Broiler pan and grid

Clean with warm, soapy water or a soapy steel wool pad.

- Clean after each use.
- Wash, rinse and dry well.
- Do not clean in Self-Cleaning Oven if broiler pan and grid are heavily soiled. (See note on page 19.)

Oven racks

Use Self-Cleaning cycle.

• Leave in oven during Self-Cleaning cycle. **OR**

Clean with warm, soapy water or soapy steel wool pads.

• Wash, rinse and dry. Use soapy steel wool pads for heavily soiled areas.

NOTE: The oven racks will discolor and be harder to slide when left in the oven during the Self-Cleaning cycle. If you want them to stay shiny, remove from the oven and clean by hand. If racks are left in the oven during the Self-Cleaning cycle, apply a small amount of vegetable oil to the sides of the racks to make them easier to slide.

Oven door glass

Use spray glass cleaner or warm, soapy water and a nonabrasive plastic scrubbing pad.

- Make sure oven is cool.
- Follow directions provided with the cleaner.
- Wash, rinse and dry well.

Self-Cleaning oven

For areas outside the Self-Cleaning area use warm, soapy water or soapy steel wool pads.

- Follow directions starting on page 19, "Using the Self-Cleaning cycle."
- Do not use commercial oven cleaners.
- Do not use foil to line the bottom of your Self-Cleaning Oven. (See page 9 for proper use of aluminum foil.)

The oven light

The Oven Light will come on when you open the oven door. To turn the light on when the oven door is closed, push the Oven Light Switch on the control panel. Push the switch again to turn off the light.

AWARNING

Electrical Shock and Personal Injury Hazard

- Make sure oven and light bulb are cool and power to the oven has been turned off before replacing the light bulb. Failure to do so could result in electrical shock or burns.
- The bulb cover must be in place when using the oven. The cover protects the bulb from breaking, and from high oven temperatures. Because bulb cover is made of glass, be careful not to drop it. Broken glass could cause injury.

To replace the oven light:

- 1. Unplug appliance or disconnect at the main power supply.
- 2. Remove the glass bulb cover in the back of the oven by pushing the wire holder to the side and pulling out the glass cover.
- **3.** Remove the light bulb from its socket. Replace with a 40-watt appliance bulb.
- 4. Replace the bulb cover and snap the wire holder in place. Plug in appliance or reconnect at the main power supply.

NOTE: Make sure oven light is off during the Self-Cleaning cycle. Keeping oven light on will shorten bulb life.

If You Need Service Or Assistance If cooking results are not what you expected:

We suggest you follow these steps:

1. Before calling for assistance ...

Performance problems often result from little things you can find and fix without tools of any kind.

If nothing operates:

- Is the gas turned on?
- · Is the power supply cord plugged into a live circuit with the proper voltage? (See Installation Instructions.)
- · Have you checked your home's main fuses or circuit breaker box?
- Have instructions in this book been followed?
- Is the flow of combustion and/or ventilation air to the unit obstructed? Do not obstruct air flow to and around unit.
- Recheck suspected defect.

If the oven will not operate:

- Are the electronic controls set correctly? See pages 5-16.
- Have you programmed a delay start time?

If burner fails to light:

- Is the oven connected to electrical power?
- Have you checked your home's main fuses or circuit breaker box?

If the Self-Cleaning cycle will not operate:

- Does the clock show the correct time of day?
- Have you set a delay start time?

If the cooling fan does not shut off after the Self-Cleaning cycle is completed:

Canceling the Self-Cleaning cycle will not turn off the cooling fan. The fan will only shut off after electronic controls have sufficiently cooled.

- Is the oven level?
- · Does the oven temperature seem too low or too high? See page 13.
- If needed, have you preheated the oven as the recipe calls for?
- If broiling, have you completely closed the oven door? Broiler provides best cooking results with the oven door closed.
- Are you following a tested recipe from a reliable source?
- If baking, have you allowed 1 1/2 to 2 inches (4-5 cm) on all sides of the pans for air circulation?
- Are the pans the size called for in the recipe?

If you need assistance* ...

Call Whirlpool Consumer Assistance Center telephone number. Dial free from anywhere in the U.S.:

1-800-253-1301

and talk with one of our trained consultants. The consultant can instruct you in how to obtain satisfactory operation from your appliance or, if service is necessary, recommend a qualified service company in your area.

If you prefer, write to:

Mr. Donald Skinner Director of Consumer Relations Whirlpool Corporation 2000 M-63 Benton Harbor, MI 49022

Please include a daytime phone number in your correspondence.

3. If you need service* ...

Whirlpool has a nationwide network of authorized WhirlpoolSM service companies. Whirlpool service technicians are

trained to fulfill the product warranty and provide after-warranty service, anywhere in the United States. To locate the authorized Whirlpool service company in your area, call our Consumer Assistance Center telephone number (see Step 2) or look in your telephone directory Yellow Pages under:

APPLIANCES - HOUSEHOLD - ELECTRICAL APPLIANCES -MAJOR - SERVICE & REPAIR MAJOR - REPAIRING & PARTS OR

> WASHING MACHINES, DRYERS & IRONERS - SERVICING

4. If you need FSP* replacement parts* ...

FSP is a registered trademark of Whirlpool Corporation for quality parts. Look for this symbol of quality whenever you need a replacement part for your Whirlpool appliance. FSP replacement parts will fit right and work right, because they are made to the same exacting specifications used to build every new Whirlpool appliance.

To locate FSP replacement parts in your area, refer to Step 3 above or call the Whirlpool Consumer Assistance Center number in Step 2.

- 5. If you are not satisfied with how the problem was solved* ...
- Contact the Major Appliance Consumer Action Panel (MACAP). MACAP is a group of independent consumer experts that voices consumer views at the highest levels of the major appliance industry.
- Contact MACAP only when the dealer, authorized servicer or Whirlpool have failed to resolve your problem.

Major Appliance Consumer Action Panel 20 North Wacker Drive Chicago, IL 60606

- MACAP will in turn inform us of your action.
- *When requesting assistance, please provide: model number, serial number, date of purchase, and a complete description of the problem. This information is needed in order to better respond to your request.

Notes
